San Diego State University -- This page last updated 9/9/10

Due Sept 28 23:55

Create a view based iPhone app that converts from centigrade to fahrenheit. The application is to have one text field to enter temperature in centigrade, one button that when pressed will compute the equivalent fahrenheit temperature, and a label which will display the fahrenheit temperature. You may find that the interface needs more elements to make it usable.

### **What to turn in**

A zip file containing your Xcode project.

If you leave out any files and realize this before your assignment is graded you will have to upload the entire assignment to the course portal. **The entire assignment will get the late penalty.** If you are prone to forgetting parts of assignments then download your assignment after you submit it and check it.
